

NOZZLES/MONITORS

MULTI-GALLONAGE MONITOR NOZZLE (300-500-700-1,000 GPM)

DESCRIPTION

The Buckeye Multi-Gallonage Master Stream Nozzle gives the operator a high degree of flexibility in applying large volumes of water to a fire. The flow rate can be manually adjusted, without tools through the full flow range by using a quick turn of the spring loaded flow selection device at the tip of the nozzle.

Using this nozzle, the flow rate can be dialed-in and control of water usage easily managed. The Buckeye nozzle design ensures a superior flow pattern from wide angle to straight stream. The nozzle is constructed from aluminum with a grey anodized finish. The standard inlet is a 2 1/2" (63mm) FNST.

FEATURES

- Four (4) flow selection ranges.
- Easily adjustable flow section device.
- Nozzle supplied with 2 1/2" FNST swivel inlet connection.
- Suitable for use with water, AFFF, AR-AFFF & Class A foam solution.
